

FIG. 1 is a perspective view of a device 10 in accordance with the present invention. The device 10 includes a central body 12 and a plurality of arms 14 extending radially from the central body 12. The arms 14 are arranged in a circular pattern around the central body 12. The central body 12 is connected to a base 16 by a neck 18. The base 16 is supported by a pair of legs 20 and 22. The device 10 is shown in a perspective view, with dashed lines indicating the internal structure and the position of the arms 14 when they are retracted. The device 10 is shown in a perspective view, with dashed lines indicating the internal structure and the position of the arms 14 when they are retracted.
